

Drive Ogi Yan Ergonomic Master

Drive

Drive is an electric height regulation desks which allows for customized standing and sitting positions and is a great ergonomic solution.

The electrical height regulator, located underneath the work surface, simplifies changes in positions depending on one's office needs. Changing position during long

working hours increases work effectiveness, productivity and health. To create an intimate atmosphere, Drive allows you to add acoustic panels. Drive bench gives the opportunity of quick and easy adjusting to individual needs without compromising on functionality and space. Each work station has its own individual mechanism which works independently.

Ogi

From a classic four-legged variant through a radial one with MFC legs to a desk adjusted to the user's size featuring a sit-sit frame – the Ogi desk is a personalised workstation that suits every pocket.

The variety of options results from the combination of a universal top in multiple sizes and forms with diversified

frame types, coming in both a single and double version, that allow to create an arrangement of any size. Combined with various cable management accessories or desk panels the Ogi desk provides a well-organised work station that enhance efficiency.

Yan

Yan is the ultimate solution for companies that have multiple project teams who need more room to work and positively interact.

One of the most important elements in planning your ergonomic office space, is the functionality of your office furniture. This is why you can use the panels

interchangeably by dividing your workplace into straight or intersecting sections. Yan has been designed to not only serve multi-station offices, but also to create professional spaces for managers and directors. Combined with side tables, and partition walls a complete and cozy work environment can be created.

Ergonomic Master

A functional system of working desks allows arranging the office in versatile ways.

What makes the system unique is a characteristic leg based on an aluminium foot. Inside the leg there is

an easily accessible cable duct, which considerably shortens the time needed to prepare and install necessary electronic devices. The system offers a wide variety of shapes and work places elements, which can be matched in a number of different ways.
